

GAGetrak<sup>®</sup>  
Issue & Return

# Locating Gages Is No Longer an Issue.

With GAGetrak's Issue & Return module, you'll never lose track of your gages again.

This simple, easy-to-use interface gives you quick access to GAGetrak's Issue Gages, Return Gages and Kit Entry screens as well as the data tools and utilities pictured below. This module is a perfect solution for a gage or tool crib operator who does not need a full copy of GAGetrak.

## Issue Gages and Return Gages

The Issue Gages and Return Gages screens allow you to manually enter the data associated with each gage issuance and return or, if you have a barcode reader and have labeled your gages using the GAGetrak Calibration Label Kit, you can scan the gage's barcode, automatically populating the gage's information, saving even more time and ensuring data accuracy.

Using Issue & Return allows you to track each instance of a gage being loaned out or sent out for calibration or repair and its return to the crib.

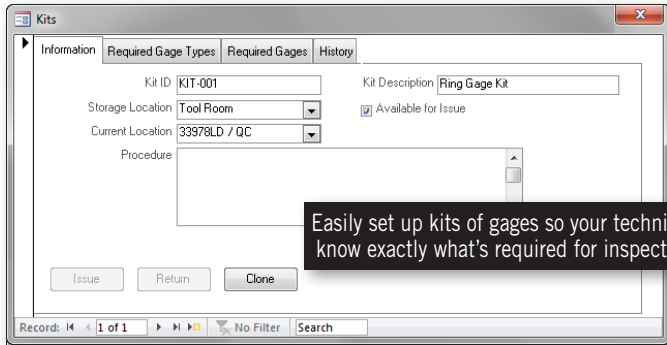

By tracking this information, you will be able to locate any gage at any time and you can identify which gages are used most often and by whom.

The 'Issue Gages' form contains the following fields: Gage ID (002E-DMIC), Ref. Standard (checkbox), Next Due Date (7/15/2016), Issue Date (5/17/2016), Issue Time (9:54 AM), Type (Usage), Issued To (Dan David), Issued Dept (QC), Part No. (10-221-1), PD No. (empty), Promised Date (5/19/2016), Storage Location (Crib 2-Calibration), Current Location (Gage Crib 2-3), Received Date (empty), Received Time (empty), Received From (dropdown), Cycles (empty), and Notes (empty). Buttons at the bottom include 'Clear Form', 'Issue Gage', and 'Issue Label'. A black callout box at the bottom right contains the text: 'Enforce accountability by knowing exactly when and to whom a gage was issued.'

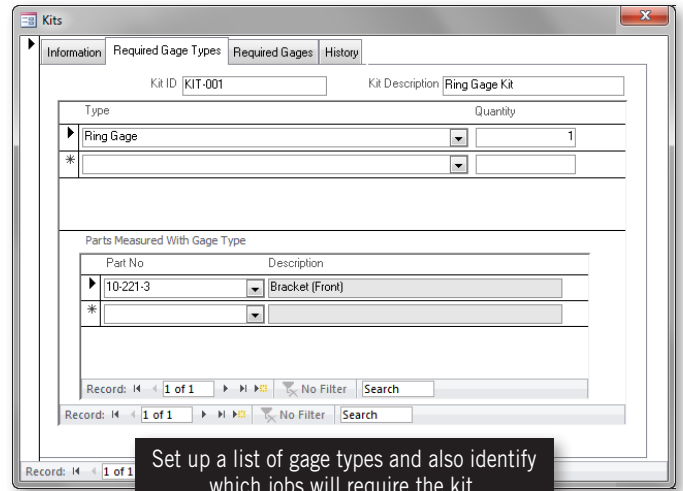

The 'Return Gages' form contains the following fields: Gage ID (002E-DMIC), Next Due Date (7/15/2016), Issue Date (5/17/2016), Issue Time (9:54 AM), Type (Usage), Issued To (Dan David), Issued Dept (QC), Part No. (10-221-1), Storage Location (Crib 2-Calibration), Current Location (Dan David / QC), Received Date (5/19/2016), Received Time (10:24 AM), Received From (Dan David), Cycles (empty), and Notes (Returned in good condition). Buttons at the bottom include 'Clear Form' and 'Return Gage'. A black callout box at the bottom right contains the text: 'Record the date on which a gage was returned and the condition in which it was received.'

## Kit Entry

A kit is a collection of gages or accessories used to measure a specific part. Gages or accessories comprising a kit may be issued individually or the kit can be issued in its entirety using the Kit Entry screens of the Issue & Return Module.

Easily set up kits of gages so your technicians know exactly what's required for inspections.

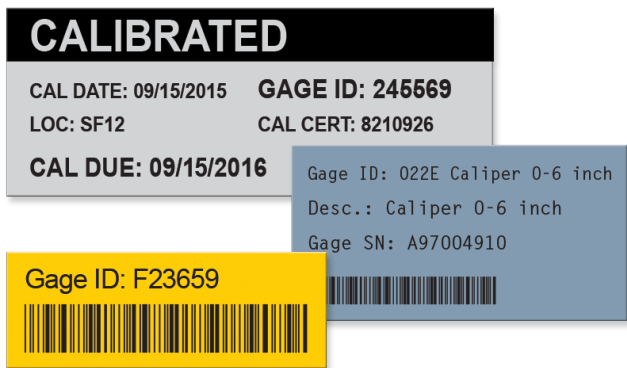

Set up a list of gage types and also identify which jobs will require the kit.

## Calibration Label Kit

Create durable, laminated, bar-coded calibration labels directly out of GAGEtrak. The compact Brother® printer (PT-9700PC or PT-9800PCN) comes complete with cables, label design software and everything else you'll need to get started.

The laminated labels are designed and tested for use in harsh-environment applications to offer protection from moisture, temperature extremes, industrial chemicals, UV and abrasion and are available in a variety of sizes and colors.

GAGEtrak's Issue & Return Module is an easy, efficient way to track gage locations and most importantly, it enables you to provide a traceable gage usage history for every gage.

Contact us today for a free web demo to see GAGEtrak's Issue & Return Module in action.

Label your gages with the Calibration Label Kit and then use a bar code scanner to quickly and easily check them in and out. Using a bar code scanner improves efficiency and ensures data accuracy by eliminating the possibility of human error.
