

UPDATES AND ENHANCEMENTS

GAGETRAK VERSION 8.5

This document references version 8.5 of both GAGetrak Pro and GAGetrak Lite.

Category	Description
Product Enhancement	GAGetrak version 8.5.1 is now localized for Spanish language users. Note: While there are other language options that GAGetrak will support, they are not currently localized; this means that a native speaker has not yet verified the accuracy of the translation. In most cases, any Latin-influenced language selected in GAGetrak other than Spanish will likely be up to 70% accurate, based on Microsoft's Translator.
Issue corrected	Customers upgrading from GAGetrak 6 or 7 would have duplicate Status values after the Data Utility upgrade - this will no longer occur in 8.5.1 upgrade data. Note: Customers who upgraded earlier and experienced this issue can correct this issue manually using the List Management tool in Settings.
Issue corrected	Subscription License customers would not be able to ascertain the days remaining in their subscription or trial due to an issue identified wherein the Subscription License dialog would display zero values for day and date information.
Issue corrected	Customers using GAGetrak Lite could no longer connect to SQL Server after upgrading to version 8.4.9 (Microsoft.SQLclient.server not found). This was related to a change made in support of Microsoft's Azure SQL instance offering.
Issue corrected	Customers upgrading from GAGetrak 6 or 7 with Security enabled would find their "Security Method" changed after running the Data Utility upgrade i.e., a "Windows Login" setting would be changed to "Application Login" and vice versa.
Issue corrected	An issue was identified in our product download wherein users on a Spanish, French or other Latin-based Windows Display Language would not be able to enter the Web Extraction code to unlock the installation of GAGetrak version 8.
Fatal error eliminated	A fatal error would occur if a user filtered on the Description column where Special characters were present i.e., data contained a ["]].
Issue corrected	In the License Manager tab of the GAGetrak About window, the "Number of seats in use" would not update in session to reflect current seats used when a seat was released.

Issue corrections made in this update do not reflect a complete list of issues identified in the previous release (to minimize the risk of creating further code issues during the update process, some problems identified may be reserved for correction in a later update). Therefore, if you have reported an issue that you do not see listed here and you received a confirmation from our support team, it will likely be corrected in a future update.
