

FEATURE COMPARISON

	PRO	LITE	FDA
Simple calibration scheduling and reminders	✓	✓	✓
Comprehensive calendar-based scheduling tools: after establishing schedules pertaining to your calibrations, activities, MSA studies, transfers and reminders, use the flexible calendar to view and manage the schedule; conflicts are easy to remedy with simple, drag-and-drop functionality	✓		
Configurable interface elements: split screens, grid column selectors, saved views and filters	✓	✓	
Canned reports	✓	✓	✓
Enhanced reporting: customizable ad-hoc reports from relevant views throughout the application	✓	✓	
Due listing dashboard: calibration and reminders	✓	✓	✓
Additional dashboard control: activities and MSA studies	✓		
Custodian management: store detailed information for your suppliers, staff and customers and easily monitor how they interact with your gages	✓	✓	
Simple data entry and records management: gage cloning and find/replace tool for data entry views	✓	✓	✓
Enhanced data entry and record management tools: complete record templates for gage families, activities and transfers	✓		
Tool issue and return tracking	✓	✓	✓
Extensive gage crib management: transfers can follow two-step transactional or single-step routing models; transfer a single gage or multiple gages in a batch and apply configurable routing rules to fit your needs	✓		
Email automation: schedule and automatically email calibration due lists to specified recipients	✓	✓	✓

PRO LITE FDA

Notification manager: enhanced email notification management lets you create a custom schedule and email due lists, reports and gage events to specified recipients	✓		
Simple gage association tracking: link gages to specific custodians to track calibrators and your gage users	✓	✓	✓
Comprehensive gage associations: link gages not only to custodians, but also to products; specific measurement capabilities to identify and track where gages are used	✓		
Complete measurement systems analysis: utilize R&R, ANOVA, linearity, bias and stability studies to gain control of your measurement system	✓		✓
Uncertainty tracking	✓	✓	✓
Comprehensive uncertainty budgeting: apply multiple contributors like hysteresis, parallax or your MSA study results to your calibration uncertainty budgets	✓		✓
Measurement formulas: manage and apply unique formula calculations to your measurements automatically when a result is entered during calibration	✓		✓
Comprehensive calibration frequency adjustment tools: monitor and automatically adjust calibration frequencies based on common NCSL performance guidelines; track and monitor the cost of failed calibrations	✓		✓
Full control of pre-defined list boxes plus availability of up to six custom fields in every major view area	✓		
Schedule pausing: eliminates unnecessary calibration cycles; gage schedules can be automatically paused based on your custom rules	✓		
Gage calibration history tracking: with one simple click, see every time a gage has been calibrated	✓	✓	✓
Additional gage history tracking: see where a gage was transferred, when it was calibrated, which products it has touched - monitor the full gage lifecycle	✓		
Electronic signatures: with our role-based electronic signatures, you can sign calibration records in stages that fit your company's specific work flow	✓		✓
