

INFORMATION DRIVES IMPROVEMENT

GAGETRAK INFO CENTER

A window into your quality system is a window of opportunity. Use GAGetrak Info Center to ensure calibrations are being completed on time, verify that gages coming due are never overlooked and so much more. This efficient on-demand reporting utility is a must-have asset in your quest for continuous improvement.

Gages

GAGetrak Info Center is a read-only access point from which managers or gage end users can retrieve and report on various aspects of GAGetrak data when a full license of GAGetrak is not needed. This stand-alone utility connects to your GAGetrak Pro or Lite database(s), allowing you to generate ad-hoc reports, filtered and sorted as needed, as well as formatted canned reports, for gage, calibration, activity, custodian, product and transfer records.

Calibrations

Both the ad-hoc and canned reports (including cal certs and failure notices) are generated directly from relevant areas of the program and with just a few clicks, you can sort, filter, modify, export, print, save and email reports. You can also schedule recurring and triggered report emails via Notifications.

Activities

Because Info Center connects to your GAGetrak database, your User Info settings (company name, division name and company logo) and Report Control ID text settings (for document control) are all active in Info Center. It also utilizes the same security system as GAGetrak, so anyone with a GAGetrak user account can access Info Center.
