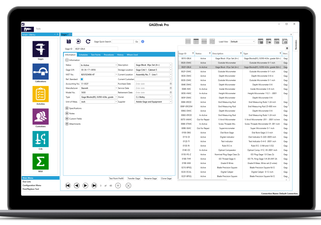
GAGETRAK 8: A MODERN SOLUTION TO THE TECHNICAL LIMITS OF GAGETRAK 7



GAGEtrak 7 has served many of our customers faithfully for years. Built on a Microsoft Access front end and supported by the Microsoft Access Runtime, it helped organizations manage critical data workflows with a lightweight, accessible interface. But as IT environments have evolved, the platform has begun to show its age — not because it wasn't well-designed, but because the world it was designed for has changed dramatically. If you're still on GAGEtrak 7, chances are you've run into at least one of these issues...

QUICK TIP FROM OUR SUPPORT TEAM

DID YOU KNOW THAT GAGETRAK CAN DO THIS?

Add a Calibrator without Having to Create a Security Login

In a calibration record, the **Done By** field contains a list of names which is populated by custodian records. You can add a calibrator to the system without giving that person a security login to GAGEtrak by creating a new custodian record.

From the main menu, select **Custodians**. At the bottom of the window, click the **(+)** icon; in the ensuing **Create New Custodian** pop-up window, name the custodian, specify the new custodian as a supplier, staff member or customer and check the **Assignable** checkbox. This checkbox is used to designate whether that custodian can be selected in a form, i.e., a calibrator for a calibration or an owner of a gage.

Once all the information has been filled out, click the **Ok** button at the bottom of the pop-up window. Your new custodian can now be selected from the **Done By** drop-down list in calibration records.

We encourage you to explore the additional capabilities of your GAGEtrak software and as always, keep an eye out for future quick tips.

GAGEtrak calibration management software is developed and distributed by
