

eView Newsletter December 2020

Happy Holidays from all of us at CyberMetrics!

With the holidays upon us, we want to take this opportunity to thank you for your business and to wish you a wonderful holiday season and the very best in the new year. We look forward to continuing to serve you.

Please note that our offices will be closed on the following days:

Thursday, December 24 - Christmas Eve
Friday, December 25 - Christmas Day
Thursday, December 31 - New Year's Eve
Friday, January 1 - New Year's Day

Coming Up

Registration is open now! Don't miss out on these upcoming training classes and free webinars.

To register for training or for info about our custom training options, please contact our Training Specialist at 1-800-777-7020 ext. 134 or training@cybermetrics.com.

THE [BASICS] = of GAGΣ $\sqrt{\text{UNCERTAINTY}}$

All manufacturing companies that get audited require some or all of their calibration certificates to specify the calibration uncertainty. At a minimum, some manufacturers only need certified uncertainty for gages that are reference standards, which are used to calibrate other gages. Those companies would usually send their reference standards to an outside calibration source for certification. Often it would be convenient, however, to know how to certify your own gages. For those companies, as well as companies that have to certify all of their calibrations, this article shows the steps required to do your own uncertainty certifications.

Our Web Training sessions are instructor-led and provide training certification upon completion. Best of all, your team will not have to leave the office (or their homes) to complete this valuable training.

Tech Tip

Enhanced Gage Status Monitoring in GAGetrak 7

Gage Status has expanded from a basic indicator of Active vs Inactive to a method of categorizing gages. In previous versions of GAGetrak, only Status 1 was Active, but now, any status can be designated as such, which adds dynamic opportunity to sorting, locating groups of gages and filtering reports.

As an example, many companies designate between company-owned and employee-owned gages. Frequently, the ownership designation is made in the **Owner** field on the **Gages -> Information** tab, but this field is typically not in reports or the Quick Filter. Further, if the company's policy is to enter the employee's name in the **Owner** field, searching for all employee-owned gages can become challenging. The GAGetrak sample database installs with Status 6 - Employee Owned. This status is set to be included in lists of due gages, so these gages appear on the Dashboard and on all Due Listing reports. Navigate to **Setup -> Status IDs** to add a new status category or to change the settings of an existing category.

Enter a new status in the empty row of fields on the **Status IDs** window. Check the checkbox on the right to include gages with that status on Due Listing reports and the Dashboard (i.e., to designate those gages to be included in lists of due gages). After saving the record, a new, blank row of fields will
