TECH TIP

Skip Dates and Skip Days

GAGetrak lets you define days of the week and specific dates to be skipped when calculating calibration due dates. These days might include weekends, holidays, plant shutdown periods, etc. You also define whether you want the calibration due date to be adjusted to the previous or following available day; this adjustment occurs seamlessly upon passing a calibration.

In GAGetrak 7, navigate to the **Setup -> Settings -> Calendar** tab; in GAGetrak Lite, navigate to the **Settings -> Calibration** tab.

In the **Skip Date Entry** pane (called **Days of Week to Skip** in GAGetrak Lite), check the checkbox for any day of the week you want to regularly skip.

In the **Skip Dates** pane (called **Specific Dates to Skip** in GAGetrak Lite), enter a specific date you want to skip. As you enter a date, a new, empty field appears to add another date.

In the **Skip Date Direction** field, you may choose either **Skip Forward** (which is the default) or **Skip Backward**. Selecting **Skip Forward** means that if a calibration due date falls on a skipped day/date, it would automatically be moved to the next available day in the future. Likewise, **Skip Backward** will set the due date to the first available day prior, which assures your gages will never be out of calibration on the floor.

Should you have a gage which does not conform to the global skip setting, you may change the **Skip Direction** setting for that specific gage on the **Gages -> Schedule** tab. In GAGetrak Lite, this setting is in the **Gages -> Calibration Schedule** tab, **Default Skip Date Direction** field.

We encourage you to explore the additional capabilities in your GAGetrak software and as always, keep an eye out for future Tech Tips.
